

## **Commodity Movements**

# Commodity Flow Survey

## Abstract

The Commodity Flow Survey (CFS) provides data on the movement of freight by type of commodity shipped and by mode of transport. The CFS is a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and includes major improvements in methodology, sample size and scope. The Bureau of the Census used a sample of 200,000 domestic establishments randomly selected from a universe of about 800,000 in manufacturing, mining, wholesale, and some selected activities in retail and service. Each selected establishment reported a sample of shipments for a two-week period in each of the four calendar quarters of 1993. This produced a total sample of about 12 million shipments. For each sampled shipment, respondents reported domestic origin and destination, Standard Transportation Commodity Classification (STCC) code, weight, value, and modes of transport. Respondents also provided information on whether the commodity was shipped in a container, a hazardous material, or an export.

## Source of Data

A sample of manufacturing, mining, wholesale, auxiliary warehouses, and selected retail and service establishments completed a questionnaire.

## Attributes

Geographic Coverage of Data: U.S. totals, state, 89 National Transportation Analysis Regions (combination of Bureau of Economic Analysis Economic Areas)

First Developed: 1993

Update Frequency: Quinquennial (next planned survey year is 1997)

File Format: Aggregate data only will be released

Media: CD-ROM, Printed source, Internet

## Significant Features/Limitations

The 1993 CFS differs from previous surveys in expanded coverage of intermodal transportation, additional industry coverage, and more detailed geographic levels. Earlier surveys reported only the principal mode. The 1993 survey asked for all modes used for the shipment (for-hire truck, private truck, rail, water, pipeline, air, parcel delivery or U.S. Postal Service, other mode, unknown). The 1993 CFS produces data at the U.S., state, and National Transportation Analysis Region (NTAR) levels. There are 89 NTARs, comprised of BEA Economic Areas covering the United States.

The 1993 CFS does not cover shipments of crude petroleum and imports, which primarily affect water transportation and pipelines. Oak Ridge National Laboratory has estimated commodity flows for these two categories. Also, the Survey does not cover establishments classified in the Standard Industrial Classification as farms, forestry, fisheries, oil and gas extraction, governments, construction, transportation, households, foreign establishments, and most retail and service businesses. Furthermore, the CFS does not cover data on shipments originating in Puerto Rico and other U.S. territories and possessions. Commodities that are shipped from a foreign location to another foreign destination, through the United States (e.g., from Canada to Mexico) are also excluded from the Survey.

## Commodity Movements Originating in South Carolina Summary of 1993 CFS

In South Carolina, the CFS measured \$84 billion of goods shipments weighing 117 million tons. South Carolina accounted for approximately 1 percent of the value and 1 percent of the weight of total U.S. shipments. See attached table. The CFS data cover shipments by establishments in mining, manufacturing, wholesale, and selected retail and service industries. The data exclude most shipments of crude oil; therefore, the totals and percentages do not fully reflect the contribution of pipeline shipments.

The major commodities shipped by establishments vary when measured by value and weight. The main commodities originating in South Carolina by value were: textile mill products; chemicals or allied products; machinery, including computers; food or kindred products; and apparel or other finished textile products. The main commodities by weight were: lumber or wood products, excluding furniture; nonmetallic minerals; petroleum or coal products; clay, concrete, glass, or stone products; and chemical or allied products.

Local transportation of freight is important to South Carolina's commerce. The CFS shows that in 1993, about 31 percent of the value and 64 percent of the weight of total shipments from South Carolina were shipped to destinations within the state. About 19 percent of the value and about 53 percent of the weight of all

shipments were between places less than 50 miles apart. In comparison, about 30 percent of the value and 56 percent of the weight of total U.S. shipments were between places less than 50 miles apart. In South Carolina, about 32 percent of the value of shipments and 72 percent of the weight of shipments were between places less than 100 miles apart.

Approximately 69 percent of the value and 36 percent of the weight of all shipments from South Carolina went to other states. The two most important destinations by value and weight were North Carolina and Georgia. Other important destination states by value of shipments were: Florida, Virginia, and Michigan. Other important destinations by weight of shipments were: Virginia, Florida, and Ohio.

Most commodities were moved by trucks, about 87 percent of the value and 89 percent of the weight. Rail accounted for about 5 percent of the value and 8 percent of the weight of shipments. The CFS data confirm the rising importance of parcel, U.S. postal, and courier services that have emerged in recent years. In 1993, this mode of transport was used to ship \$5 billion or 6 percent of the value of all shipments in South Carolina. In comparison, about 9 percent of the value of total U.S. shipments were moved by this mode.

1993 Commodity Flow Survey State Summary: South Carolina  
Tabulation by the Bureau of Transportation Statistics, U.S. Department of Transportation

Summary	Value	Weight
Total shipments originating in South Carolina	\$83.6 billion	117.2 million tons
Percent of total U.S. shipments (preliminary U.S. estimate)	1.4	1.2

Commodity Shipments Originating in South Carolina Ranked by Value		Commodity Shipments Originating in South Carolina Ranked by Weight	
Commodity	Percent of value	Commodity	Percent of weight
Textile mill products .....	18.4	Lumber or wood products excluding furniture .....	21.8
Chemicals or allied products .....	11.0	Nonmetallic minerals .....	17.0
Machinery, including computers .....	8.4	Petroleum or coal products .....	12.7
